Customer	Nordic Resins AB	Type	Half-year business review (conference call)

ATTENDEES

Name	Company	Role
Mr Pierre Valentin	ChemCorp Industries S.A.	Sales Director
Ms Sophie Durand	ChemCorp Industries S.A.	Key Accounts Nordic / Benelux
Mr Samuel Osei	ChemCorp Industries S.A.	International Logistics
Mr Erik Lindqvist	Nordic Resins AB	Procurement Manager
Ms Astrid Svensson	Nordic Resins AB	Head of R&D
Mr Johan Persson	Nordic Resins AB	Quality Assurance

BACKGROUND

Customer profile: Manufacturer of alkyd and unsaturated polyester resins for paints and coatings. Head office in Södertälje (Sweden). Revenue approx. €95M. Purchases from ChemCorp: phthalic acid (300 t/year), maleic anhydride (200 t/year), propylene glycol (400 t/year).

Meeting context: Standard half-year business review. Nordic Resins recently acquired a plant in Finland (Tampere), creating new requirements. Negotiation on extending the framework contract (expires June 2024).

PROCEEDINGS

1. Delivery performance H1 2024

Mr Osei presented the logistics KPIs: 14 deliveries completed since January 2024, on-time rate 100% (an improvement on 92% in H2 2023 following the transport reorganisation). H1 volume: 225 t (phthalic acid 85 t, maleic anhydride 65 t, propylene glycol 75 t). On track to exceed the annual target.

Mr Persson confirmed 0 quality complaints in H1 2024. He noted that Nordic Resins will adopt the IATF 16949 standard for its new plant in Finland — additional requirements will be sent in May for validation by ChemCorp.

2. Requirements for the new Tampere site (Finland)

Mr Lindqvist presented the requirements of the new site: production start-up planned for October 2024. Estimated Tampere volumes: propylene glycol 150 t/year, phthalic acid 80 t/year, and potentially fumaric acid 50 t/year (a product not yet supplied by ChemCorp).

Finland logistics: Mr Osei assessed the options — road transport via the Helsinki ferry from Hamburg (6-day lead time), or storage with a Finnish forwarder (Kemi Logistics, a ChemCorp partner). Solution selected: a 30-day forward stock at Kemi Logistics in Tampere, replenished monthly.

Ms Durand proposed an amendment to the framework contract covering the Tampere site on terms identical to the Södertälje site. The combined volumes make it possible to move to the next discount tier (-2.5% on all products). Mr Lindqvist was very favourable — the amendment is to be drafted.

3. Fumaric acid — new item

Ms Svensson explained the fumaric acid requirement: it is used as a co-monomer in unsaturated polyester resins to improve chemical resistance. Nordic Resins currently buys from a Chinese supplier (CNHC Chemical) with recurring quality problems (impurities, purity variations).

Mr Valentin checked during the meeting: ChemCorp has a qualified European supplier (Bartek Ingredients, Canada/Europe) for technical grade fumaric acid. Purity: above 99.5%, with a systematic COA. Price: approx. €920/t (against approx. €750/t from the current Chinese supplier plus transport and quality costs).

Ms Svensson agreed to receive 100 kg for internal qualification (10 weeks of testing). If qualified: regular supply would start in Q1 2025. Volume: 50 t/year.

4. Renewal of the 2024-2026 framework contract

The current contract expires on 2024-06-30. Mr Valentin proposed a 2-year extension (July 2024 — June 2026) with an annual price revision clause and extension to the Tampere site.

Key points negotiated: a price indexation mechanism based on ICIS Chemical Prices (published monthly), notice of termination increased to 6 months (from 3 months currently), and a supplier site audit accepted by ChemCorp every 2 years.

Agreement in principle on the terms. Mr Valentin will send the draft contract for Nordic Resins legal review before 30 April. Signature targeted before 2024-05-31.

Minutes CRC-NORDIC-2024-05 — Opportunities & action plan

IDENTIFIED OPPORTUNITIES

Opportunity	Context	Likelihood	Next step
Fumaric acid 50 t/year	Replacing the Chinese supplier on quality	High	Valentin — 100 kg qualification Q2
Tampere extension	Propylene glycol + phthalic acid + fumaric acid	Confirmed	Framework contract amendment
Speciality alkyd resins	Ms Svensson interested in bio-based diacids	Prospective	2025

ACTION PLAN

ChemCorp owner	Action	Due date
Mr Valentin	Send the 2024-2026 framework contract proposal including Tampere	2024-04-30
Mr Osei	Contract the storage agreement with Kemi Logistics Tampere	2024-05-30
Mr Valentin / Purchasing	Order 100 kg of Bartek fumaric acid + arrange shipment to Södertälje	2024-04-20
Ms Durand	Pass the IATF 16949 requirements received in May to the ChemCorp Quality department	2024-05-15

Next contact: Framework contract draft review: week of 2024-05-06. H2 business review: October 2024.
